

Topic fun

Off to sunny Australia this week, where the weather is warm and the animals are really dangerous! We have been practising our research skills, finding out about the worlds most dangerous creatures and making our own deadly 60 cards. We have also designed and built off road vehicles, with wheels that really go round!

Nuts and bolts.

On the back of this sheet you will find a long list of high frequency words that the children need to be able to spell! We are working on this at school too, but some practise at home would be brilliant—thank you! Try and combine spelling with a bit of handwriting practise—the children should be able to join up the letters in these words.

Maths Corner

We have been practising our adding up and taking away skills this week, checking carefully to see which operation we need to do and having a go at some missing number problems. Can you work out a sum where the answer is bigger than 100?

We have also been doing some measuring using cm and m and having a try at adding up and taking away using measurements.

How tall are you in cm? How high can you reach? How much higher can mum or dad reach than you?

What is the highest your family could reach if they all stood on each other's shoulders?

Things to remember...

Recorder club for **WALNUT** class will be on **MONDAY** next week. Don't forget your recorder.

The curriculum trail is coming up on Thursday 22nd March first thing in the morning. This year it's all about maths—we'd love to see you if you can make it.

I'm bored box.

Design your own dangerous animal. Will it bite, squash or sting? You could make a model, draw or paint it—then write all about it!

Writing Corner

Use the internet or a book to find out about an animal that fascinates you.

Make some notes so that you can remember the important things. Have a go at writing some brilliant sentences about your animal—remember use your own words, don't copy!
