- We do not utilise any heating or cooling to the public malls which benefits the environment by removing completely the CO2 emissions associated with heating and cooling.
- We utilise LED light fittings throughout that are controlled by a combination of light sensors, lux sensors, PIR's and a building management system to minimise our electricity consumption.
- We ensure waste does not go to landfill by separating and recycling all forms of waste.
- We are ISO14001 accredited which ensures an environmental management system is adhered to.
